

0:13

Before we begin the Data Science journey, you first need the data set. And to get the data set,

0:19

you need to know where it is. This is what we will be covering in the first module.

0:24

How do you discover data? There are three things that you will learn in this module.

0:31

The first is, what are the different sources of datasets? Where can you find them? The second

0:37

is what are the different kinds of datasets, structured, unstructured, and semi-structured.

0:44

Third, in each data set, what are the different kinds of values that you will find? This will

0:50

give you a sense of locating the kind of data set that you want, either on the internet

0:56

or within your organization, or even within your phones.
